

ADVENTURES ON THE ISLE

Biosphere Birds - see now at Independent Arts

Inspired by birds in the loW Biosphere, these wire sculptures were created by A-Level students as part of the Creative Biosphere project. The project aims to engage young people in their local environment and make connections with the world outside their classroom.

I taught the students my various techniques working with florists' wire and helped develop their ideas and forms. By using such a fine wire, the work reflects drawing and continues the concept of a 3D drawing in space.

You can see the birds on display in the windows at Independent Arts' Creative Hub. Come and have a look, we're in the middle of Newport, 48 High Street, opposite Waterstones.
